EDUCATION

Master of Science in Computer Science

University of Florida

Aug 2025 - May 2027

Gainesville, FL

Bachelor of Science in Computer Science

University of Denver

Sep 2020 - Jun 2024

Denver, CO

- Minors: Geographic Information Science, Mathematics
- Institutional Honors: **Summa Cum Laude**, Overall **GPA: 3.91**

SKILLS

Languages Python | Java | C++ | TypeScript | JavaScript | SQL | HTML/CSS | Bash | PHP

Web & APIs React | Next.js | Node.js | JSP/Servlet | Apache Tomcat | Selenium

Data & ML PostgreSQL | MongoDB | SQL Server | Prisma | PyTorch | TensorFlow | scikit-learn | Pandas | NumPy

DevOps & Tools Git | GitLab | Docker | Jira | Confluence | Bugzilla | MobaXTerm | pycocotools

EXPERIENCE

UFIT Research Computing, University of Florida

May 2026 - Present

Support and Applications Intern

Gainesville, FL

- Engineered internal tools and **Python/Linux** automation scripts, scaling Tier 1 operations and eliminating weekly manual overhead.
- Adapted scientific research applications on **HiPerGator** supercomputer, ensuring reliable **GPU** and **CPU** execution for hundreds of researchers.
- Provided Tier 1 **HPC** user support and triaged service requests for faculty, staff, and graduate researchers.

University of Florida, IFAS

Jul 2025 - Present

Web Application Developer

Gainesville, FL

- Developed Florida's SART disaster response platform using **Java JSP/Servlet**, **SQL Server**, and **Apache Tomcat**.
- Delivered a 52% page load improvement on high-traffic galleries via WebP conversion, validated with **Selenium** performance testing.
- Engineered an email batch processing tool and led the **JDK 8** to **JDK 21** migration, including javax-to-jakarta namespace resolution.

University of Florida, MALT Lab

Sep 2025 - Jan 2026

Machine Learning Researcher

Gainesville, FL

- Executed a benchmarking study of **YOLO** architectures across 250+ experiments, identifying optimal real-time object detection pairings.
- Co-authored research on reproducible evaluation pipelines using **pycocotools** for standardized scoring (COCO AP50-95, Jaccard Index).
- Containerized end-to-end **ML pipelines** with **Docker** for GPU deployment, automating training and hyperparameter sweeps via **Bash**.

Marsico Institute

Oct 2023 - Jun 2024

Web Developer

Denver, CO

- Rebuilt website content and accessibility with **HTML**, **CSS**, **JavaScript** and maintained **PHP/SQL** back-end systems in an Agile environment.
- Contributed to a 40% increase in organic traffic and significantly faster page loads through full-stack optimizations.

NOTABLE PROJECTS

Clario: AI-Powered Teaching Platform

Jan 2026

- Built a full-stack educational platform with an interactive instructor dashboard and performance visualizations using **Next.js**, **Prisma**, and **Recharts**.
- Integrated **Google Gemini AI** to parse curriculum PDFs and auto-generate lesson plans, cutting instructor prep time from hours to minutes.

Adversarial & Privacy Defenses on CIFAR-100

Fall 2025

- Implemented defenses against membership inference attacks and adversarial examples (FGSM, PGD) on CIFAR-100 with **ResNet-18**.
- Applied differential privacy (**DP-SGD**) and adversarial training in **PyTorch** to characterize the robustness and accuracy tradeoff.
